

# Handbook of Economic Statistics 1978

A Research Aid

This publication is prepared for the use of U.S. Government officials. The format, coverage and contents of the publication are designed to meet the specific requirements of those users. U.S. Government officials may obtain additional copies of this document directly or through liaison channels from the Central Intelligence Agency.

Non-U.S. Government users may obtain this along with similar CIA publications on a subscription basis by addressing inquiries to:

Document Expediting (DOCEX) Project Exchange and Gift Division Library of Congress Washington, D.C. 20540

Non-U.S. Government users not interested in the DOCEX Project subscription service may purchase reproductions of specific publications on an individual basis from:

Photoduplication Service Library of Congress Washington, D.C. 20540

# Handbook of Economic Statistics 1978

STATINTL

Comments and queries regarding this Handbook are welcome. They may be directed to the Public Affairs Staff, telephone 351-7676. The principal statistician is Office of Economic Research, Central Intelligence Agency, Washington, D.C. 20505.

#### **FOREWORD**

#### 1. Purpose and Scope

The *Handbook of Economic Statistics*, 1978, provides statistics for selected non-Communist countries and all the Communist countries.

In general, the data in the *Handbook* are for 1960, 1965, and 1970-77. Data for the Communist and non-Communist countries have been adjusted, when necessary, to achieve comparability and therefore may differ from data presented in the original sources. Footnotes have been used liberally to give definitions, exceptions, and methodology. The base year for average annual rates of growth is the year prior to the stated period.

#### 2. Rounding of the Totals

The totals have been rounded, with some exceptions, to three significant digits. In general, zeros appearing after the last nonzero number following the decimal point are not significant but are used merely for consistency in presentation, and, because of rounding, components may not add to the totals shown. Totals are not presented if missing data are believed to represent a significant part of the total.

#### 3. Symbols

The abbreviation N.A. (not available) is used when information about the existence of the data or the magnitude of the data is not available, and the abbreviation Negl. (negligible) is used when the magnitude of the data is less than one-half of the final unit employed for each table.

#### 4. Sources

The data given for the most recent years are frequently preliminary and subject to revision. The data for the Communist countries are estimates of this Office, official data from the country cited, or estimates made by other organizations. The data for

the non-Communist countries are from publications of the United Nations and the Organization for Economic Cooperation and Development (OECD), publications of US government agencies, or unclassified publications of other international organizations or individual countries, or are estimates of this Office.

#### 5. Terms

Unless otherwise indicated, the term Communist Countries includes the USSR, the countries of Eastern Europe, China, North Korea, Vietnam, Albania, Cuba, and Yugoslavia; the term Eastern Europe includes Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, and Romania. The term European Community includes Belgium, Denmark, France, Ireland. Italy, Luxembourg, the Netherlands, the United Kingdom, and West Germany. The term developed countries includes the European Community, Austria, Finland, Greece, Iceland, Israel, Liechtenstein, Portugal, Malta, Norway, Spain, Sweden, Switzerland, Turkey, Australia, Canada, Japan, New Zealand, the Republic of South Africa, and the United States. The term Organization for Economic Cooperation and Development includes Greece, Portugal, Spain, Turkey, and all the developed countries, except Liechtenstein, Malta, Israel, and the Republic of South Africa.

Except for economic and military aid data, the term less developed countries of the Free World includes the following: (1) all independent countries of Africa except the Republic of South Africa; (2) all independent countries of East Asia except Japan but including Taiwan; (3) all independent countries in Latin America except Cuba; and (4) all independent countries in the Middle East and South Asia, except Israel and Turkey. Except for Cyprus no country in either eastern or western Europe is in the LDC grouping. Except for Hong Kong, no territory that is a possession, trust, or protectorate is included in the LDC grouping.

The definition of less developed countries for economic and military aid conforms to that used by

the Development Assistance Committee and other aid agencies and includes the following non-Communist countries: (1) all independent countries of Africa except the Republic of South Africa. (2) all countries of East Asia except Hong Kong and Japan, (3) Malta, Portugal, and Spain in Europe, (4) all countries in

Latin America, except Cuba, and (5) all countries in the Middle East and South Asia.

Totals for the country groupings may or may not include all of the countries listed above, depending on the commodity or services listed.

The data do not necessarily represent food available for consumption, because imports of foreign grain and exports of domestically produced grain are not included.

<sup>&</sup>lt;sup>2</sup> Excluding corn silage and forage but including sorghum for grain.

b Including miscellaneous grains and pulses. Measured in bunker weight, that is gross output from the combine which includes excess moisture, unripe and damaged kernels, weed seeds, and other trash. For comparison with US or other country grain output, an average discount of 11 percent should be applied.

<sup>\*</sup>Data are on a carcass weight, bone-in basis.

Including poultry and excluding slaughter fats, rabbit, and variety meats.

<sup>•</sup> Including horsemeat, rabbit, poultry, game, edible offal, and lard.

<sup>&</sup>lt;sup>7</sup> Data are for factory sales and include complete units exported for assembly.

<sup>\*</sup> As of the end of the year.

<sup>\*</sup>Data are understated because they are based on the number of households with one or more units; thus, a household with more than one is counted as having only one.

Data for the non-Communist countries were converted from national currencies by using the 1977 Par Rate/Market Rate factors.

<sup>&</sup>lt;sup>2</sup> Including data for West Berlin.

<sup>&</sup>lt;sup>3</sup> See footnote 1 of Table 9 for an explanation of the data.

<sup>&#</sup>x27;The dollar values of gross national product are not official figures. They are estimates based on Western concepts and procedures which compare as closely as possible to values published by Western countries. Estimates of GNP in domestic prices were converted at US purchasing power equivalent and extended to 1977 by means of the US official deflator for GNP. For additional information, see T. P. Alton "Comparative Structure and Growth of Economic Activity in Eastern Europe," in U.S. Congress, Joint Economic Committee, East European Economics Post-Helsinki: A Compendium of Papers (Washington, D.C., 1977).

For the individual OECD conotries the ratios for converting GNP in national currencies at 1977 prices into 1977 US dollars on the basis of purchasing power equivalents are derived from the 1970 ratios in A System of International Comparisons of Gross Product and Purchasing Power, published for the World Bank by The Johns Hopkirs University Press, Baltimore and London, 1975 p. 9. using the geometric mean of foreign and US weighted ratios. These 1970 GDP parities were moved to 1977 by applying the following factor: the derived price indexes for each OECD country for 1970-77 divided by a derived price index for the United States for 1970-77. These price indexes were derived for each country by dividing the growth of GNP in constant prices. The ratios thus obtained were applied to the GNP values, given in the national currencies in 1977 prices.

For the individual European OFCD countries, the ratios for converting GNP in national currencies at 1977 prices into 1977 US dollars on the basis of US purchasing power equivalents are derived from the 1950 ratios in Milton Gilbert and Associates. Comparative National Products and Price Levels, OEEC. Paris, 1958, using the geometric mean of European and US weighted ratios. These 1950 ratios were moved to 1977 by applying the following factor: the derived price indexes for each European country for 1950-77 divided by a derived price index for the United states. For 1950-77. The ratios thus obtained were applied to the GNP values, given in the national currencies in 1977 prices.

<sup>&#</sup>x27;L'ouverted at US purchasing power equivalents in approximately the same manner as the data for the European countries

<sup>\*</sup>Including data for West Berlin

Based on 1977 prices.

Table 9

Gross National Product, by End Use, in the US and the USSR

| Other government expenditures | 229.0     | 158.7     | 69      |
| GNP                           | 1,706.5   | 960.4 2   | 58      |

<sup>&</sup>lt;sup>1</sup> US data in market prices. Total Soviet gross national product (GNP) and the various end uses were converted to dollars not by the official rate of exchange but by the average purchasing power ratio of the dollar and the ruble calculated from actual or estimated prices paid for various goods and services in the two economies. For GNP as a whole and for each end-use component of GNP, these average ratios (ruble-dollar ratios) were estimated by weighting individual price ratios by both US and Soviet expenditure weights. The geometric mean of the US weighted and Soviet weighted ratios was then used for the conversion of Soviet values into dollars.

The magnitudes for the Soviet end-use components were calculated to measure quantity of output compared with the United States but not the cost in resources. The share of total economic resources devoted to a particular end use or the share of total output originating in an individual sector (for example, agriculture or industry) in the USSR should be measured in internal ruble prices and costs.

The end uses of GNP are defined as follows:

- (1) Consumption comprises personal expenditures for goods and services for all purposes and noninvestment outlays by government for goods and services for health and education.
- (2) New fixed investment is defined as the sum of expenditures for gross private domestic investment net of inventories; for public construction other than that for military factilities; and for equipment purchased by the government except that for defense. Since part of new fixed investment in the United States is capital repair, one-half of Soviet expenditures on capital repair is included in Soviet new fixed investment.
- (3) Other government expenditures for the USSR include expenditures on defense, research and development (R&D), civil space, inventory change, administration, net exports, and a statistical discrepancy. Administration includes expenditures on civilian internal security, general agricultural programs, public organizations, government administration, and social welfare. Other government expenditures for the United States include defense, administration, net exports and military assistance, outlays for space R&D, change in inventories and stockpile, and a statistical discrepancy. Administration is the residual left after all current expenditures for national defense, health, education, and all capital expenditures are subtracted from government purchases of goods and services.
- <sup>8</sup> The sum of the end-use components of Soviet GNP, valued in dollars, does not equal the dollar value of aggregate GNP, because of the use of average ruble-dollar ratios in converting from ruble values to dollar values. Nevertheless, the individual end-use components were not adjusted to agree with the total, since the US-USSR comparisons shown are believed to give the best available description of relative size.

Including gold and foreign exchange. Data for the non-Communist countries also include special drawing rights and the reserve position in the International Monetary Fund. Data before 1972 are expressed in terms of US dollars at the official par values and, in 1972-77, reflect the realignments of the exchange rates and the revaluations of the dollar price of gold.

¹ The official indexes purportedly measure changes in the gross value of industrial production. In general, the gross value of production equals the sum of the value of output of all industrial enterprises. As a result, since both intermediate and final goods are included in the value of output of each enterprise, industrial products are double-counted. If, as the evidence suggests, intermediate product (for example rolled metal) increases relative to final product (for example machine tools) inflation of output from increased double-counting takes place. In addition to inflation in the official indicator from this source, disguised inflation also enters the index through new-product pricing, where minor product improvements result in a new-product pricing is substantially higher than can be justified by either improved quality or increased production costs. Because output of these "new" products grows from a small base their rates of growth will proceed at a higher rate than that of "old" products.

Adjusted indexes of industrial production—parallel to those used by the Federal Reserve Board for measuring US industrial output—are constructed in order to circumvent most of these distortlons i.e., price-weighted samples of several final products form output indexes for various industrial components and these component indexes are combined into an aggregate index for industry by use of value-added weights.

<sup>\*</sup>An official index is not published.

<sup>\*</sup> An adjusted index is not available.

Indexes for the non-Communist countries are value-added weighted indexes of intermediate and final products of industry includes manufacturing, mining, and, in most countries, public utilities. The indexes for the Communist countries are estimates of this Office (See Table 18 for detailed explanation i—constructed as nearly as possible on the same basis as the indexes for Western countries—or other calculations accepted by this Office. The indexes for the Communist countries include manufacturing, mining, and public utilities.

Index of gross values of output for individual commodities and branches are assisted by 1970 value-added weights. The three sectors covered—materials, machinery, and nondurable constitute 48-21 percent, 32-88 percent, and 18,91 percent, respectively, of the value-added weights for industrial production. This index is as comparable as data will permit with the index of US industrial production of the US Federal Reserve Board.

<sup>\*</sup>Estimates of this Office were computed by applying value-added weights to data for commodity production. The data are fragmentary and uncertain; therefore, the index should be researched as providing only a tentative indication of the general level and trend in production.

Excluding production of seeds and of feed for horses and mules

<sup>\*</sup> Estimates based on the value of crop production plus the value of livestock products, with allowance for changes in livestock numbers, but minus feed (including grain imported for feed),

seed, and waste. The weights used to aggregate estimated agricultural output are the average prices realized by all producers for products sold in 1970. Estimates based on the value of crop production plus the value of livestock products, with allowance for changes in livestock numbers, but minus feed (including grain imported for feed),

seed, and waste. FAO, East European, and Soviet wheat price relatives for 1961-65 were used to compute the indexes

<sup>&#</sup>x27;Based on estimates of grain and cotton production

<sup>\*</sup> Based on official grain claims

<sup>&</sup>lt;sup>1</sup> Except for the United States, data are from the United States Arms Control and Disarmament Agency, based on the ratio of military expenditures to gross national product (GNP) at current market prices. Military expenditures are for current and capital expenditures to meet the needs of the armed forces, including expenditures of national defense agencies for military programs, expenditures for the military components of such mixed activities as atomic energy, space, and research and development, military assistance to foreign countries; and expenditures on paramilitary forces where they contribute substantially to a country's military capabilities.

<sup>&</sup>lt;sup>a</sup> Based on the ratio of military expenditures to CNP in constant 1975 prices. <sup>a</sup> Including data for West Berlin.

<sup>&</sup>lt;sup>1</sup> Total average f.o.b. costs paid by present or former concessionaires.

<sup>\*</sup> F.o.b. prices set by the government for direct sales and, in most cases, for the producing company buy-back oil.

<sup>&</sup>lt;sup>4</sup> Weighted by the volume of production.

<sup>&</sup>lt;sup>4</sup> A 10-cent-per-barrel discount will be offered to buyers provided they meet their minimum contractual lifting volumes for second half 1977. The discount will be credited to the lifting companies' accounts beginning in first quarter 1978.

Table 25

#### Consumer Price Index 1970 = 100 OECD United States Canada Japan European Community Belgium France Italy Netherlands United Kingdom West Germany RR Communist Countries NA USSB 5 Eastern Europe 2 N.A Czechowlowakia N.A. Hungary N A Poland RR Other Yugoslavia

Implicit price index obtained from a comparison of indexes of goods sold in the retail trade network in constant and in current prices. The current price index is based on the values of total retail and collective farm market sales in current prices regularly published in Soviet statistical abstracts. The index in constant prices is derived from the goods components of the OER index of total consumption. A more complete explanation of the methodology and a discussion of the relative merits of an "official" or "alternative" price index are contained in "Soviet Economy in a New Perspective," Joint Economic Committee, Congress of the United States, 14 October 1976, p. 631

<sup>\*</sup>Calculated differently than for the USSR, the official index of personal consumption in current prices was deflated by a calculated index of personal consumption in constant prices. An explanation of the methodology used to calculate personal consumption is presented in Thad P. Alton. ed., "Index of Personal Consumption in Poland, 1937 and 1946-1967." Occasional Papers of the Research Projection National Income in East Central Europe (NY 1. W. International Financial Research, Inc. 1973)

Since the initial devaluation of the US dollar, in December 1971, the Communist countries have frequently adjusted their exchange rates relative to the dollar Changes in the exchange rates reflect the position of the dollar relative to other Western currencies.

<sup>&#</sup>x27;Official rates unless otherwise Indicated. These rates are used for converting trade statistics

<sup>&#</sup>x27;Prifess otherwise indicated, data quoted by USSR Gosbank

<sup>\*</sup>Rates used for noncommercial transactions such as diplomatic tourist, and student expenditures, personal remittances; and the like Some countries have special rates for tourists and personal remittances in addition to the noncommercial rate.

The unofficial rates actually used in East German accounting of foreign trade transactions. The official rate is 2.05

<sup>\*</sup>Since January 1976, Hungary expressed the value of its foreign trade in domestic forints rather than diviza forints as in previous years. The rates compare with the former official rate of 8.51 diviza forints per US \$1 and 13.04 diviza forints per 1 ruble. Gosbank USSR still quotes rates for the diviza forint, which remains unchanged at 13.04 per 1 ruble.

Although the Socialist Republic of Vietnam is a unified country, different currencies are in use in the Northern and Southern zones. The internal exchange rate is 1. Northern, dong = 0.8. Southern, dong = 0.8. Southern, dong = 0.8.

<sup>\*</sup>Pre-1973 devaluation rate, the postdevaluation rate is unknown

<sup>&</sup>quot;Dinar floating relative to the dollar

<sup>&</sup>lt;sup>1</sup> Because of the well-known difficulties in using Soviet established prices as a measure of resource burden, the shares of gross national product (GNP) in this table are based on GNP at factor cost. In calculating GNP at factor cost, 1970 end-use weights have been revised from an established price basis to a factor cost basis by subtracting turnover taxes and profits and adding implicit amortization charges, implicit interest costs, and subsidies. These revised weights are then moved over time by indexes of the value of the various end uses in constant profices.

<sup>&</sup>lt;sup>1</sup> Statistics are reported in investment prices of 1 January 1969.

<sup>&</sup>lt;sup>2</sup> Preliminary.

Including consumption of food, soft goods, durables, personal services, and personal and government outlays for education and health.

<sup>&</sup>lt;sup>4</sup> Including machinery and equipment, construction and other capital outlays, and net additions to livestock.

<sup>\*</sup> Preliminary.

<sup>&</sup>lt;sup>8</sup> Rounded to the nearest tenth of a billion rubles.

Estimated using coefficients of other years calculated as the ratios between investment in prices of 1 July 1955 and prices of 1 January 1969.

<sup>&</sup>lt;sup>5</sup> Computed as a residual; includes investment in nonferrous metallurgy, timber, paper, woodworking, and miscellaneous other branches of industry.

<sup>&</sup>lt;sup>8</sup> Computed as a residual.

<sup>1</sup> For computing average annual rates of growth, the base year is the year prior to the stated period

<sup>\*</sup> Preliminary

<sup>3</sup> Including the value of basic herds.

<sup>\*</sup> Based on indexes of GNP (1970 rubles), by sector of origin, at factor cost.

Inputs of manhours, capital, and land are combined using weights of 55.8 percent, 41.2 percent, 3.0 percent, respectively, in a Cobb-Dougias (linear homogeneous) production function. These weights represent the distribution of labor costs (wages, other income, and social insurance deductions), capital costs (depreciation and a 20 percent charge on gross fixed capital, including livestock), and land rent in 1970, the base year for all indexes underlying the growth rate calculations

<sup>&</sup>lt;sup>1</sup> Based on CIA estimates rather than Soviet official series. The latter are believed to lead to an upward bias the rates of growth because of double-counting and disguised inflation. The branch indexes shown above are formed by combining a sample of products in which intrabranch purchases have been excluded. The indexes for industrial materials, consumer nondurables, and total industrial production are formed by combining the component branch indexes using 1970 value-added weights.

<sup>&</sup>lt;sup>2</sup> Inputs of manhours and capital are combined using weights of 52.4 percent and 47.6 percent, respectively, in a Cobb-Douglas (linear homogeneous) production function. These weights represent the distribution of labor costs (wages and social insurance deductions) and capital costs (depreciation and a 20 percent charge on gross fixed capital) in 1970, the base year for all indexes underlying the growth rate calculations.

<sup>\*</sup>The base year is the year prior to the stated period. Rates of growth are derived from unrounded data.

<sup>&</sup>lt;sup>8</sup> Preliminary.

Estimates of drawings are based on data derived from contracts indicating delivery and credit terms and on Soviet imports of machinery and equipment. A large number of contracts since 1965 have involved 85 percent credit and 6 percent interest. Repayment periods for the earlier credits were usually three to five years following downpayment. Typical terms since 1965 have been eight years following delivery of equipment.

<sup>&</sup>lt;sup>4</sup> Preliminary import data may not include purchases of western pipe and equipment for the Orenburg pipeline; this was the case in 1976

<sup>\*</sup>Including estimated receipts from arms sales, unofficial transfers, and net receipts from toutism and transportation

<sup>\*</sup> Excluding medium-term horrowing by the International Investment Bank and the International Bank for Economic Cooperation, which horrows on behalf of CEMA countries. The extent to which the USSR has borrowed (if at all) from these CEMA banks is unknown.

<sup>\*</sup> Including intra-CEMA hard currency trade and other hard currency payments

<sup>&</sup>lt;sup>1</sup> Data are rounded to the nearest \$5 million. Estimates are based on data reported by trading partners. Where data are incomplete, as for most less developed countries and for many of the Communist countries, estimates are based on fragmentary information from trade agreements and press reports and on commodity breakdowns available for earlier years.

<sup>&</sup>lt;sup>1</sup> Data are rounded to the nearest \$5 million. Estimates are based on data reported by trading partners. Where data are incomplete, as for most less developed countries and for many of the Communist countries, estimates are based on fragmentary information from trade agreements and press reports and on commodity breakdowns available for earlier years.

Official East European statistics. Trade with the Communist countries was derived by converting the value of the trade expressed in the currency of each East European country to rubles and then to dollars at the prevailing foreign exchange rate. Exports are on an finb basis. Imports are finb except for Hungary, which is on a c.i.f. basis.

<sup>\*</sup>Including data for Albania, China, Cuba Mongolia, North Korea. Vietnam and Yugoslavia

<sup>&</sup>lt;sup>1</sup> Domestic currency converted into US dollars at the exchange rate prevailing at time of transactions. Exports are on an f.o.b. basis. Trade with the Communist countries was derived by converting the value of the trade expressed in the currency of each East European country to rubles and then to dollars at the prevailing foreign exchange rate.

<sup>&</sup>lt;sup>2</sup> Preliminary

<sup>&</sup>lt;sup>3</sup> The official West German Deutschemark/US dollar rate was used to convert intra-German trade in East German marks to US dollars because using the East German mark/US dollar rate understates the value of trade. East Germany converts West German marks into East German marks at parity, but actually the East German mark is worth less than the West German mark.

Imports are Lob, except for Hungary, which is on a culf-basis. Trade with the Communist countries was derived by converting the value of the trade expressed in the currency of each East European country to rubles and then to dollars at the prevailing foreign exchange rate.

**?**₹

Preliminary

The official West German Deutschemark. US dollar rate was used to convert intra-German trade in East German marks to US dollars because using the East German mark. US dollar rate understates the value of trade. East German work less than the West German marks at parity, but actually the East German mark is worth less than the West German mark.

Interregional .....

Data are for fiscal years and are for official development assistance, which is concessional. Data for 1976 include the transitional quarter.—July, August, and September.

<sup>&</sup>lt;sup>2</sup> Data are reported on a net basis, excluding total deobligations.

Data reported are on a gross basis.

<sup>&</sup>lt;sup>4</sup> Including Bangladesh prior to 1972.

<sup>&</sup>lt;sup>1</sup> Fiscal years Including deliveries under the following programs (a) Military Assistance Program grants under the various Mutual Security Acts, (b) Foreign Military Sales, which consist of US-financed arms. US-guaranteed private arms credits, and US-approved commercial sales, and (c) Excess Stock Sales, which involve surplus equipment that has been valued at 33 percent of the original acquisition value. The Military Assistance Service Funded program, designed to support non-US forces engaged in combat in Indochina, was provided directly from the US military budget and was not included in earlier reporting. US data exclude some \$700 million in naval equipment made available under the Ship Loan and Lease Program.

| Other                   | 615     | N.A.    | 615     | N.A.  | 5     | 25     | 10    | 115            | 305    | 155    |

¹Including military sales and downpayments, as well as military aid. Data have been rounded to the nearest \$5 million.

<sup>&</sup>lt;sup>1</sup> Excluding data for Eastern Europe prior to 1956 because war reparations, other assets, and privileged arrangements obtained by the USSR from these countries created a heavy net flow of capital toward the USSR during these years; data are unavailable for North Korea and Vietnam after 1965 and for Mongolia after 1967; the data exclude Soviet sugar subsidy payments to Cuba Because of the large trade deficits East European countries have had with the USSR in recent years, it is likely that there have been unpublicized credits

Preliminary

<sup>&</sup>lt;sup>a</sup> Data are for fiscal years. Until 1972 US Department of Defense data did not include the Military Assistance Service Funded (MASF) program. The sharp increase in exports beginning in 1972 is accounted for to some extent by the inclusion of this category of assistance.

<sup>&</sup>lt;sup>1</sup> Data are not comparable with those presented in previous editions of the Handbook of Economic Statistics because of a revision in the methodology used to convert fuels to oil equivalent. Data are for coal, crude oil, natural gas, and hydroelectric and nuclear electric power expressed in terms of oil equivalent, and exclude minor fuels such as peat, shale, and fuelwood.

<sup>&</sup>lt;sup>2</sup> Including data for Luxembourg.

<sup>&</sup>lt;sup>4</sup> The portion of total resources which has been assessed as being exploitable under local economic conditions and available technology. Data for the non-Communist countries exclude brown coal and fismite. Data for coal are expressed in terms of coal equivalent (7,000 kilocalories per kilostam).

<sup>\*</sup>Unless otherwise indicated, data are for crude oil and exclude natural gas liquids, shale oil, natural gasoline, and synthetic crude oil.

<sup>1</sup> Including shale oil

<sup>\*</sup>Including about one-half of neutral zone production, which amounted to about 470,000 barrels per day in 1976

<sup>\*</sup>Including small quantities of synthetic crude oil

<sup>&</sup>lt;sup>1</sup> Unless otherwise indicated, data are for the following products, where they are produced: gasoline, kerosene, distillate fuel oil, lubricating oil, residual and other petroleum products, natural gasoline, and liquefied petroleum gases. Data exclude some minor miscellaneous products such as white spirits and asphalt.

<sup>&</sup>lt;sup>a</sup> Data include products from indigenous and imported natural crude oil and from synthetic sources. Synthetic production is not included in production for the USSR.

Data include only gas from natural gas wells and associated gas from petroleum fields

Data for the United States are in terms of net marketed production. Data lor the USSR are believed to refer to gross production less losses and waste. US gross production (less losses and waste), which would include gas returned to reservoirs in order to maintain horizon pressure, would be as follows. In billion cubic feet:

| 1960   | 1985   | 1970   | 1971   | 1972   | 1973   | 1974   | 1975   | 1978   |
|--------|--------|--------|--------|--------|--------|--------|--------|--------|
| 14,514 | 17 657 | 23 786 | 24 068 | 24.016 | 24,067 | 22,850 | 21.103 | 20,944 |

A much smaller share of total production in the USSR is believed to be used for repressuring.

Data are for net production—that is, for gas actually collected and utilized as fuel or raw material. They thus exclude gas used for repressuring, as well as gas flared, vented, or otherwise wasted, whether or not it has first been processed for the extraction of natural gasoline.

<sup>&#</sup>x27;Twelve months ending 30 June of the stated year

<sup>\*</sup>Including gas used for repressuring and gas wasted

<sup>\*</sup>Gross production

<sup>&#</sup>x27;Unless otherwise indicated, data are for net production of anthracite and bituminous coal.

<sup>\*</sup>Twelve months ending 30 June of the stated year.

<sup>&</sup>lt;sup>8</sup> Including brown coal.

<sup>&</sup>lt;sup>4</sup> Excluding data for Northern Ireland.

<sup>&</sup>lt;sup>6</sup> Including low-quality coal at its hard-coal equivalent.

<sup>\*</sup>Including a negligible amount of brown coal.

<sup>&</sup>lt;sup>1</sup> Data are for total (gross) production at generating centers and therefore include transmission losses and station use (see footnote 2).

Data are gross production or estimates of gross production based on reported net, adjusted by increasing by 7.5 percent the thermal electric production to include production that is consumed by the station itself. Hydroelectric production that is consumed by the station itself is a negligible part of the gross production. Therefore, no attempt has been made to adjust the net production for hydroelectric power.

Unless otherwise indicated, data are for the gross amount of marketable iron ores in the state in which they leave the mines, including manganiferous ores but excluding pyrites.

<sup>&</sup>lt;sup>4</sup> The metal content of the ore in the OECD countries follows: United Kingdom and West Germany, 28 percent; Luxembourg, 30 percent; France, 32 percent; United States and Canada, 55-60 percent; and Australia and Sweden, 60-65 percent.

<sup>&</sup>lt;sup>3</sup> Excluding manganiferous iron ore containing 5 percent or more of manganese.

<sup>&#</sup>x27;Twelve months ending 30 June of the stated year.

<sup>&</sup>lt;sup>6</sup> Shipments.

<sup>\*</sup>Including data for West Berlin.

<sup>&</sup>lt;sup>7</sup> The metal content of the ore in the other countries ranges from 60 percent to 70 percent

<sup>&#</sup>x27;Including nonbauxite ore such as nepheline and alunite for the production of alumina.

<sup>&</sup>lt;sup>1</sup> Data are in gross weight and differ from those presented previously. In many instances, data are estimated.
<sup>2</sup> Production of chrome ore. In the Communist countries, the chromic oxide centent is estimated as follows: USSR, 46 percent; Albania, 45 percent; Cuba, 35 percent; and Yugoslavia, 26 percent.

Data are for aluminous shales and clays used for the manufacture of aluminum and exclude shales exported and those used for refractories, abrasives, and coment.

<sup>1</sup> Unless otherwise indicated, data are for oven and beehave coke and exclude breeze coke

<sup>&</sup>lt;sup>2</sup> Net production, excluding coke consumed by coking plants

<sup>\*</sup> Including beeze coke

<sup>\*</sup>Including electrorie only but excluding low-temperature coke.

\*A large part of this coke is produced in gas plants and is used with high-multiy coke in charging blast furpaces.

<sup>&</sup>lt;sup>1</sup> Including the pure content of virgin alloys.

<sup>a</sup> Including aluminum alloys.

<sup>&</sup>lt;sup>8</sup> Excluding data for New Caledonia.

Czechoslovakia and East Germany each produce a small amount of refined nickel.
 Nickel content of oxides and sulfides.

<sup>&</sup>lt;sup>1</sup> Including data for West Berlin.

<sup>\*</sup>Unless otherwise indicated, data are for smelter production of lead produced from domestic and imported ores and concentrates, excluding all metal produced from scrap (secondary sectals)

<sup>&</sup>lt;sup>3</sup> Excluding refined lead produced from imported base bullion

<sup>\*</sup>Including secondary metal, remelted lead, and alloys

<sup>\*</sup>Lead bullion from imported ores and concentrates.
\*Including data for West Berlin.

<sup>\*</sup> Probably including some secondary metal.

Crude placer platinum and byproduct metals recovered largely from domestic gold and copper refining

Platinum group metals from platinum over and sales of osmiridium from gold over.

Unless otherwise indicated, nitrogen content of synthetic ammonia.

<sup>&</sup>lt;sup>2</sup> Including regenerated caustic soda.

<sup>\*</sup> Synthetic anhydrous (commercial grade). To convert to actual production of synthetic ammonia, multiply by 1.2158.

Data are for 1961.

<sup>\*</sup>Includes only ammonia produced for fertilizer.

Unless otherwise indicated, data are for fabrics, in the piece, before undergoing finishing processes, such as bleaching, dyeing, and making up.

<sup>\*</sup> Abbreviations for units of measure are as follows: linear meters, Im; square meters, sm; and metric tons, mt.

Excluding mixed fabrics.

<sup>&</sup>lt;sup>4</sup> Mill production only. Data include finished fabrics.

<sup>&</sup>lt;sup>a</sup> Fabrics after undergoing finishing processes.

<sup>\*</sup> Including nonwoven fabrics.

<sup>&#</sup>x27;Including cellulosic fabrics.

<sup>1</sup> Unless otherwise indicated, data are for steam and hydraulic turbines. Most production of turbines is for use in matched sets with generators for production of electric power. In addition,

Shipments of units of 4,000 kilowatts and larger.

<sup>&</sup>lt;sup>a</sup> Generators for steam and gas turbines only.

turbines are produced in single units for many purposes, including direct industrial drives, marine propulsion, and pipeline transmission.

Shipments of units of 4,000 kilowatts and larger. Data are available only for turbines produced in integral units together with generators. Therefore, data for turbines and generators for the United States are assumed to be the same. Some turbines are produced in single units, but no data are available on this production.

<sup>•</sup> Including a small number of gas turbines.

<sup>4</sup> Steam turbines only.

<sup>&</sup>lt;sup>5</sup> Steam turbines of more than 500 kilowatts only.

Data are for the following products, where they are produced: barley, corn, oats, rice, rye, sorghum, and wheat

<sup>1</sup> Including miscellaneous grains and pulses. Measured in bunker weight, that is, gross output from the combine which includes excess moisture, unripe and damaged kernels, weed seeds, and other trash. For comparison with US or other country grain output, an average discount of 11 percent should be applied.

<sup>\*</sup> Excluding rice.

<sup>\*</sup>Including kaoliang, broad beans, and field peas. Tubers are included on a grain equivalent basis of 4 metric tons of tubers to 1 metric ton of grain.

<sup>&</sup>lt;sup>7</sup> Data reflect only rice production and government collections of corn; total production is considerably higher.

Data are for the following products, where they are produced: barley, corn, oats, ryo, and sorghum.

<sup>\*</sup> Excluding corn.

<sup>\*</sup>Unless otherwise indicated, data include miscellaneous grains.

Measured in bunker weight, that is, gross output from the combine, which includes excess moisture, unripe and damaged kernels, weed seeds, and other trash. For comparison with US or other country grain output, an average discount of 11 percent should be applied.

<sup>&</sup>lt;sup>6</sup> Including pulses, potatoes, and all grains except rice and wheat.

<sup>\*</sup>Corn only. Data reflect government collections only. Total production is considerably higher.

<sup>&</sup>quot;Unless otherwise indicated, data are for beet sugar produced in the calendar year. Data are given in terms of the raw value of centrifugal sugar. Refined sugar is equal to approximately 92 percent of raw sugar weight. Centrifugal, as distinguished from noncentrifugal, sugar includes cane and beet sugar produced by the centrifugal process and is the principal type of sugar moving in international trade.

<sup>1</sup> Including cane sugar; excluding data for Puerto Rico

Cane sugar only

<sup>\*</sup>Including raw care sugar imported for refining

<sup>\*</sup> Beet sugar only.

<sup>\*</sup>Raw cane sugar of 96° polarization Data are for crop years ending 30 June of the stated year

Data are on a careass weight, bone-in basis, and are for beef weal buffale, pork multion, lamb, goat, and poultry where they are produced. Unless otherwise indicated, data exclude horsement, rabbit, game, edible offal, and lard.

<sup>&</sup>lt;sup>1</sup> World and non-Communist country data include meat from animals imported for slaughter

Fixeleding poultry

<sup>&#</sup>x27;Including horsement

Data are on a slaughter weight, hone-in basis, and include horsemeat, rabbit, game, edible offal, and slaughter lats in addition to the meats listed in fo-stnote 1 above. Slaughter weight is roughly 3 percent less than carcass weight because it excludes kidney and leaf fat

<sup>\*</sup>Including horsement, edible offal and live exports

Including horsement and edible offal

<sup>\*</sup>Including live exports

<sup>&</sup>quot;Land under temporary crops, gardens, fallow or idle land, and permanent crops such as orchards and vineyards, unless otherwise indicated

<sup>1</sup> Data are 'fertilizer years' -in general, the year beginning I July
'Including phosphate rock, excluding livestock phosphates Data indicate the quantity supplied to agriculture

Arable land is total area less pasture and hayland
Sown area is used because of extensive multiple cropping

Data are "fertilizer years"—in general, the year beginning 1 July.

Deliveries by manufacturers and importers to first buyers.

Data indicate the quantity supplied to agriculture.

Data are "fertilizer years"—in general, the year beginning I July
Data are for soluble phosphate fertilizers and for ground phosphate rock used for direct application.
Data indicate the quantity supplied to agriculture
Including phosphate rock

Lexcluding urban systems; plantation, forest, mine, industrial plant, underground, funicular, and cable railroads; and short lines of little importance. Unless otherwise indicated, data are for the state or principal railroad system and include all goods and livestock carried during the calendar year and exclude service traffic, mail, and nonrevenue government stores. Freight traffic carried on more than one railroad line within a country is counted only once. Foreign trade freight traffic carried through more than one country, however, is counted in each country. Data for the United States are in tons originated, thus giving a more realistic comparison with European methods of reporting.

\*Including secondary or private railroads operating as common carriers.

<sup>&</sup>lt;sup>3</sup> Including data for Northern Ireland.

<sup>&#</sup>x27;Including service traffic.

<sup>\*</sup> Including performance of railroads owned jointly by Hungary and Austria within Hungary.

Furthelling urban systems, plantation, forest, mine, industrial plant underground funcular, and cable railroads, and short lines of little importance. Unless otherwise indicated, data are for the state or principal railroad system and include all goods and livestock carried during the calendar year and exclude service traffic, mail, and nonrevenue government stores. Freight traffic serviced on more than one railroad line within a country is counted only once. Foreign tra-le freight traffic carried through more than one country however, is counted in each country. Data for the United States include express and mail and are specifically for revenue and nonrevenue freight traffic for a more realistic comparison with Soviet methods of reporting. Including secondary or private railroads operating as common carriers.

Excluding livestock

<sup>\*</sup>Excluding data for Northern Ireland

Including mail and passenger buggage. Data are for the year beginning I April of the stated year

<sup>\*</sup>Including service traffic

including Namibia

Unless otherwise indicated, data are for international shipping and include the performance of ships of less than 1,000 gross register tons.

<sup>\*</sup> Including all aircraft that perform commercial for-hire operations

<sup>&</sup>lt;sup>3</sup> Data basically represent the inventory of Aeroflot—the Soviet civil airline

<sup>\*</sup>Including Caspian Sea, Danube River, and domestic coastal and intercoastal traffic

<sup>\*</sup> Including coastal traffic.

<sup>\*</sup>Including Danube River traffic

<sup>\*</sup> Possibly excluding the performance of some ships flying the Polish flag but under control of the Chinese-Polish Shipbrokers Corporation

<sup>\*</sup> Units of two-four, or more axies. Unless otherwise indicated, data refer to both state and private ownership of cars used on the state or principal railroad system. Data are as of the end of the year. Because of the lack of comparability in data, totals for the OECD and the Communist countries are omitted

<sup>4</sup> Units of four or more axles <sup>1</sup> Including secondary or private railroads operating as common carriers

Excluding privately owned tank cars and including data for Northern Ireland

The majority are four-axle units

- Unless otherwise indicated, data are as of the end of the year and include wheeled tractors for road haulage and exclude military trucks of all types.
- Data are for the number of registrations of privately owned trucks and include duplications when trucks are registered in more than one state.
- Beginning in 1973, only trucks less than 10 years old are being counted.
- \*Including data for Northern Ireland. Data are as of 1 October of the stated year.
- <sup>5</sup> As of 1 July of the stated year.
- \*Including both military and civilian trucks.

Ships of 1,000 gross register tons (CRT) or more. Data are as of the end of the year. Data for the non-Communist countries include all combination passenger and cargo ships, whereas, unless otherwise indicated, those for the Communist countries exclude passenger ships that have small cargo capacities.

<sup>\*</sup> Excluding ships operating only on the Great Lakes and US-owned ships flying the Liberian, Panamanian, and other "flags of convenience"

<sup>&</sup>lt;sup>3</sup> Excluding Greek-owned ships flying the Liberian, Panamanian, and other "flags of convenience"

<sup>\*</sup>Excluding the Caspian Sea Flort passenger ships and vessels subordinate to the Ministry of the Fishing Industry

<sup>\*</sup>Before August 1968, a few additional Bulgarian-owned ships were operated under the flags of non-Communist countries

<sup>\*</sup>Until March 1967, an undetermined number of Czechoslovak-flag ships were jointly owned with China

<sup>&#</sup>x27;Including some ships flying the Polish flag but under the control of the Chinese-Polish Shipbrokers Corporation At the end of 1974, there were 14 of these ships.

<sup>\*</sup>Including North Korean, Vietnamese, and Cambodian vessels in 1975-77

<sup>\*</sup>Data include a number of ships jointly owned by the Chinese-Albanian Joint Stock Shipping Company. At the end of 1976 there were three of these ships.

<sup>&</sup>lt;sup>1</sup> Tankers and whaling tankers of 1,000 gross registered tons (GRT) or more. Data are as of the end of the year and include specialized oil and chemical tankers and some combination carriers (oil/dry bulk carriers). For the purposes of this table, the tonnage is converted to deadweight (DWT).

<sup>\*</sup>Excluding ships operating only on the Great Lakes and US-owned ships flying the Liberian, Panamanian, and other "flags of convenience."

<sup>&</sup>lt;sup>3</sup> Excluding Greek-owned ships flying the Liberian, Panamanian, and other "flags of convenience."

Excluding the Caspian Sea Fleet and tankers assigned to the Ministry of the Fishing Industry.

<sup>&</sup>lt;sup>6</sup> Including North Korean, Vietnamese, and Cambodian vessels in 1975-77.

Table 158

Offloading Ports Accessible to Fully Loaded Tankers of 200,000 Deadweight Tons and Larger January 1975
